

Lake Greenwood Continuous Monitoring Study Periodic Report

September 10, 2019 - November 13, 2019

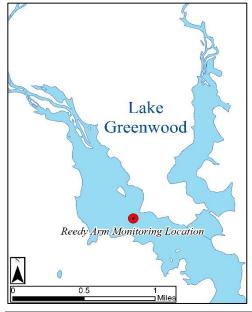

This study funded through a joint effort consisting of Greenwood County Lake Management (GCLM), Laurens County Water and Sewer Commission (LCWSC), City of Greenville, and Renewable Water Resources (ReWa).

Continuous Monitoring Report Lake Greenwood at Reedy Arm

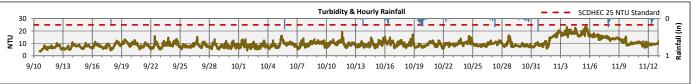

September 10, 2019 -- November 13, 2019

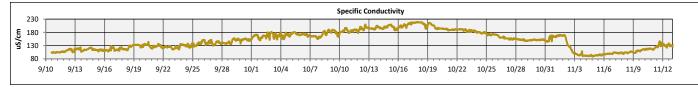

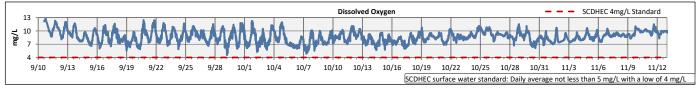

| MONITORING LOCATION CHARACTERISTICS | | |
|-------------------------------------|------------------|--|
| Station Location Name | Reedy Arm | |
| Latitude | 34.347141 °N | |
| Longitude | 82.109702 °W | |
| Appoximate Drainage Area | 260 square miles | |

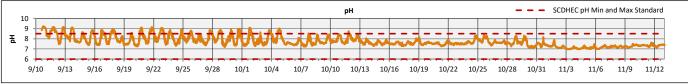

| RAINFALL CHARACTERISTICS Data collected at rain gauge located at Ekom Beach Road crossing of Reedy River | | | |
|--|---------|--|--|
| Number of Storms Over 0.1 in" | 10 | | |
| Max Storm Rainfall | 1.49 in | | |
| Total Rainfall for Period (Length of deployment: 10 weeks) | 5.12 in | | |

Continuous Monitoring Report Lake Greenwood at Reedy Arm

September 10, 2019 -- November 13, 2019

| Explanation of Statistics: | | | |
|----------------------------|--|--|--|
| MIN | The minimum value recorded by the datasonde during the reporting period. | | |
| MAX | The maximum value recorded by the datasonde during the reporting period. | | |
| MEDIAN | The median value represents the 50th percentile of the distribution of all values recorded during the reporting period. Half of the recorded values during this period fell above the median value and half fell below this value. | | |
| MEAN | The average of all the 15-minute values recorded by the datasonde during this reporting period. | | |
| ST. DEV. | The standard deviation is a measure of the variation within a dataset. A large standard deviation indicates significant variability in the dataset and a small standard deviation represents low variability. | | |

^{*}Samples collected by Greenwood Commissioners of Public Works (CPW) are analyzed for TN, TP, and Chl-a only.

These samples are collected in order to provide information on parameters which cannot be reliably measured in-situ. These sample results may be used in the future to develop statistical relationships with continuously monitored parameters in an effort to estimate continuous concentrations of these parameters. A sufficient sample size for regression analysis is typically 20 samples or more collected across a range of weather conditions.
